

Create Your Own Software Programs, Automatically, Without Programming!

THE SECRET WEAPON

Software Creator

AUTOMATIC APPLICATION BUILDER

“Your Instant Solution to Creating Software you can Reproduce & Sell!”

Do you ever wish you could get in on the booming sales of **Informational Software Products**? Well, now you can! Software Creator allows you to quickly and easily create commercial quality software programs . . . **without having to program a single line of code!**

Software Creator Makes it Possible!

Our revolutionary new software product is specifically designed to allow non-programmers to quickly and easily create Windows[®] compatible programs that they can resell to others. The process is fully automatic, and no programming is required!

It is a simple-to-use tool for creating applications that serve as *User Interfaces* for information based products. To create instant applications, Software Creator works with the text files you select. It then automatically assembles the information to create a finished executable software product. There is no programming involved. The process can take less than five minutes, and you end up with a commercial quality software application suitable for the retail market!

Easy to Learn, Easy to Use!

Even if you've never used a computer before, you'll find learning and using Software Creator is a snap. Unlike other software creation tools, it was designed to be used by non-programmers. Everything is straightforward and simple. Even those with little or no computer experience find that they can create their first program almost instantly!

Create and Market Your Own CD-ROM's and Disks!

Using this powerful development tool, you can easily create your own CD-ROM's and disks, which you can sell any way you choose. **Owning exclusive rights to a product is the best way to earn a significant income as an Information Publisher.** You can create software that sells for as much as \$99 (or more). Since your cost to duplicate the software is about \$1, there is HUGE profits to be made! You can even sell reproduction rights to your programs for as much as \$1000!

Create Programs Automatically!

You supply the content (text files, documents, public domain, Government downloads, or your own original materials), and Software Creator does the rest. There are just three simple steps in the creation process. Within minutes you can have an information product ready to deliver to your publisher, or offer to the public!

Unlimited Potential!

Use reports or publications that you already own (printed or on disk) to create software products that you can market. Since software has a high perceived value, you can now charge even more for them! You can also create electronic books (books-on-disk), sales flyers, newsletters, or product catalogs on disk (or CD) - either for yourself, or for other companies for a fee. The possibilities are endless!

You Will Have The Power to..

- Easily convert a collection of text files into a commercial quality, software application!
- Create business or educational products!
- Create software applications from readily available public domain reports, books and guides, or text files you create!
- Create products for delivery on disk or CD!
- Create your own line of software!
- Create an unlimited number of royalty free, redistributable software products!

You Are in Control!

Below is a sample of what a program developed with Software Creator will look like. You can add your own backgrounds, which can include the graphics, photos and text of your choice! Programs you create can also contain sound files. Use the one that comes with the program, or include your own. The best part is that the finished product does not contain our company name, or how the program was created. Your customers will think that you spent thousands to develop them!

Products Developed with Software Creator . . .

- ◆ Work with any version of Windows[®]!
- ◆ Are easy-to-use, no manual required!
- ◆ Are very professional looking!
- ◆ Start Quickly (with auto start in Win95)!
